Sub header

The flexible lightstrip with 16 million colours for professional mounting

Benefits

- Add decorative lighting accents
- Works seamlessly with Philips Hue
- Premium lighting quality
- Convenient smart control
- Simple flexible installation

Short description

With this smart version of the familiar flexible colour LED strip it's easy to add decorative colour accents. Seamlessly works with your Philips Hue bridge for convenient smart control. With a maximum light output of 2000lm and a choice of 16 million whites and colors you can always create the right light for any occasion.

Features

Decorative lighting accents

With up to 16 million light colours to choose from, giving your home that special touch has never been easier. Perfect for on top of a cupboard, under a kitchen bar or along the stairs.

Works with Phillips Hue and more

Innr lights work seamlessly with your Philips Hue bridge, Samsung SmartThings bridge and Amazon Echo smart speakers (Echo 4th gen, Studio or Echo Show 10).

Convenient smart control

Use your favourite smart home app to control you lights from anywhere, create scenes and automations and use you voice to switch on the lights.

Extra bright, extra smooth

With an increased light output of 2000lm you illuminate even the darkest corners. If that is too much of a good thing, you can dim the Light Strip to 0.1%. And with twice as many LEDs per meter as the competition, the illumination is exceptionally smooth for a truly premium feel.

Simple and flexible installation

The self-adhesive backing sticks easily to any hard surface. You can bend and shorten the strip.

What's in the box?

4m light strip, control box, LED driver
